3.

# Combi Folding Stairway Tower

Our best selling StairDeck stairway tower now has an optional folding base unit.

This unit simplifies the erection of the StairDeck tower base by combining all the components into one neat folding structure that one person can easily carry to the job, and build without assistance.

We have eliminated the ladder section from the lower frame, made an integral folding lock brace between the upper and lower frames, and incorporated a wider, longer work platform that assists entrance to the upper frames.

All the standard frames and components of our standard StairDeck tower fit this new base unit, which means you can incorporate it into your present kit or purchase new towers with this as an added feature.
